

Declaw only

Diet: You can resume your cat's normal diet. If they becomes sick, withhold food until morning.

Incision Care: Please check the incision daily. Some redness and swelling is a normal consequence of surgery and healing. If the incision becomes painful, opens or discharges pus or blood, please call the clinic for a re-check. A small amount of clear fluid may ooze from the incision and is considered normal. Your cat may want to lick his/her paws and tug on the surgical glue. This behavior is acceptable as long as the incision remains closed and clean. **You will need to switch the litter for 3 days from what you were using to a product such as shredded paper or Yesterday's news.** There are no sutures to remove.

If you have any questions or concerns, do not hesitate to call us at 715-358-4300.
